Summary

I am a final-year Cyber Security student at Swinburne University of Technology, currently completing a Certificate IV in Cyber Security. I have a strong foundation in IT support, troubleshooting, and customer service, with effective verbal and written communication skills. I am seeking a Level 1 IT Support or IT Technician role where I can apply my technical problem-solving skills and contribute to a professional IT environment. I am passionate about IT and actively follow industry trends.

Qualifications

Swinburne University of Technology – Certificate IV in Cyber Security

August 2025 – August 2026

Swinburne University of Technology – Certificate III in Information Technology

March 2025 – July 2025

University of Tasmania – Master of Information Technology Systems

February 2018 – December 2019

Navitas Professional – Certificate IV in Business

May 2020 – February 2021

Employment History

Networking Administrator Intern at TasCollege – Hobart, Tasmania

February 2021 – May 2021

- Assisted colleagues and students with troubleshooting and basic network configuration on Win 10 computers.
- Assisted in resolving Wi-Fi connectivity issues, performing system updates, and installing software.
- Utilised connectivity testing tools, including ping and tracert/traceroute, to identify and resolve network issues.
- Prepared report using Microsoft Word for network and system changes to support future troubleshooting.
- Developed strong problem-solving and technical communication skills while collaborating with colleagues and supporting users.

Back of House Staff at Niko Niko Sushi – Kingston, Tasmania

February 2021 – October 2024

- Delivered excellent customer service, developing clear communication skills for supporting clients.
- Collaborated effectively with team members to solve problems and maintain workflow
- Strengthened multitasking, problem-solving, and time-management skills in a fast-paced environment.

Academic Experience

Swinburne University of Technology – Certificate IV in Cyber Security

August 2025 – August 2026

- Installed and configured Windows Server 2019 and Ubuntu Server 24.04 in virtualised environments.
- Implemented Active Directory, file servers, access control, password complexity and security policies.
- Deployed and configured AWS VPCs and EC2 instances, using RDP and SSH for remote access.
- Configured network devices using Cisco Packet Tracer, including IP Configuration and WPA2/3 Authentication.
- Developed simple Python programs to prompt user input, load and display array values.
- Acquired knowledge on hardware components, including CPU, RAM, hard drives, GPU, NIC cards, and motherboards.
- Performed troubleshooting, connectivity testing, DNS resolution, and documentation across systems.
- Acquired knowledge of common security threats, including malware, DoS/DDoS, and social engineering.
- Developed and documented mitigation strategies and cybersecurity incident response plans.
- Utilised Microsoft Word, Excel, and PowerPoint to create reports, documentation, and presentations.

Swinburne University of Technology – Certificate III in Information Technology

July 2025

- Designed simple networks and configured basic network devices using Cisco Packet Tracer.
- Installed and configured virtual servers using Windows Server 2019 and Ubuntu Server 24.04.
- Configured Active Directory for access control, file permissions, and password complexity policies.
- Developed and debugged C++ programs to read and print arrays, handle text files, and reverse user input values.
- Performed troubleshooting, connectivity testing, DNS resolution, and documentation
- Familiar with Amazon Web Services (AWS); created VPCs and launched EC2 instances.
- Familiar with basic data classification, management, and security principles.
- Produced written reports and presentation materials using Microsoft Word, Excel, and PowerPoint.

University of Tasmania – Master of Information Technology Systems

February 2018 – December 2019

- Familiar with programming fundamentals, including application life cycles, prototyping, user interfaces, design principles, usability goals, and usability testing.
- Developed a website using HTML, CSS, and JavaScript, including food menu selection and shopping cart functionality.
- Developed a simple Android application using XML, Java, and Android Development Kit to record and track moods.
- Maintained reports, records, and presentation materials using Microsoft Word, Excel, and PowerPoint.

Extra-Curricular Certifications

Operating Systems and You: Becoming a Power User at Coursera and Google – Online

December 2025

- Navigated operating systems using GUI, CLI, and Linux Shell through online exercises and virtual labs.
- Acquired knowledge of users and permissions, filesystems, processes, software packages, and system updates.
- Acquired knowledge of Remote Desktop Protocol (RDP) and Secure Shell (SSH) for remote system access.

The Bits and Bytes of Computer Networking at Coursera and Google – Online

January 2024

- Acquired fundamental knowledge of networking, including Network, Transport, and Application layers.
- Acquired knowledge of common networking services, including DHCP, DNS, NAT, and VPN.
- Acquired knowledge of internet connectivity methods, including wired, wireless, cellular, and fiber connections.
- Acquired knowledge of methods to troubleshoot internet connectivity issues.

Technical Support Fundamentals at Coursera and Google

November 2023

- Acquired fundamental concepts of hardware, operating systems, networking, software, and troubleshooting.

Networking and Events

Swinburne Cyber Security Club

August 2025 – August 2026

- Participated in club activities, workshops, and cybersecurity discussions to enhance practical skills and expand professional networks.
- Discussed encryption, decryption, and IT security challenges with peers to enhance cybersecurity knowledge.

Swinburne Fintech Panels Forum

October 2025

- Participated in a panel discussion with industry experts on AI, blockchain/cryptography, and cybersecurity for small businesses.
- Actively participated in Q&A sessions, asking questions about deepfake issues, blockchain in cryptocurrencies, and data accuracy in private AI systems.
- Gained practical insights to support cybersecurity studies and enhance professional development.
